

CORE STRENGTHS

Ready to take the call.

UNIQUE & UNUSUAL FACILITIES

From specialized weapons-testing stations to model-submarine testing facilities, military projects can require a variety of specialized designs. We are adept at translating the fundamental needs of a specific structure into design specifications. Our understanding of military security standards and design/build processes results in efficiently completed facilities.

AIRFIELD FACILITIES

Military airfield infrastructure often necessitates specific design requirements related to specialized aircraft and operations. Our understanding of military standards contribute to a solid reputation for designing fixed-point utility systems, NAVAIDs, runways, taxiways, pavement repairs, and a range of airfield structures.

SEISMIC UPGRADES

A building is only as strong as its weakest point. Maintaining structural security during an earthquake enhances safety for our community. We command superior knowledge of the best practices for seismic retrofits and upgrades of a variety of military and critical care facilities

ENGINEERING SERVICES

- Facility Repair/Upgrades
- Float Design
- Pier Design
- Pile System Design
- Dredging Design
- Fender and Mooring Design
- Surface Water Management
- Sidewalk, Boardwalk, and Promenade Design
- Structural Engineering Design
- Project Management

PLANNING SERVICES

- Master Planning
- Feasibility Studies
- Permitting
- Site Inspections
- Site Planning & Development
- Land Use Entitlements
- Public Involvement
- Advisory Committee Facilitation

SURVEYING SERVICES

- Hydrographic Surveys
- Condition Surveys
- Boundary & Right-of-Way Surveys
- Topographic & Construction Surveys
- Tideland Surveys
- Aerial Control Surveys

CORE STRENGTHS

DESIGN/BUILD

We foster strong relationships and successful projects with a thorough understanding of the design/build environment. Partnering with architects and construction companies from the start demands experience and positive teaming interactions. We meet client goals through more efficient and less costly project completion.

WATERFRONT

Some of the nation's most critical military bases are found here in the Pacific Northwest. Renovation and design of quaywalls, vessel moorings, and shoreline utility systems necessitates an understanding of waterfront engineering as well as military standards. Our ability to complete a range of tasks, from dredging to unique and unusual waterfront facilities, results in one of the most established waterfront resumes in the region.

IDIQ

Understanding the IDIQ process for military work provides flexibility to the armed services for future work. Our knowledge of IDIQ requirements and availability needs simplifies the process for our military clients.
